

Lecture 2– Experiences

1DT308/1DT902 Introducerande projekt

2025-05-15

Lectures

- ~~1. Projects and processes/methods~~
2. Some personal experiences

First Of All ... The Customer

- Add Value
 - By implementing a requirement specification ?
 - By working as a “resource” ?
 - By helping, leading and/or directing ?
 - ...

Remember & Organize stuff

To start with

- I don't remember details of what people are saying.
- I can't take notes at the same time as I'm listening (or leading a conversation) → In *Verbatim mode*.
- Sometimes I don't remember what's next.

I have multiple projects running at the same time ->

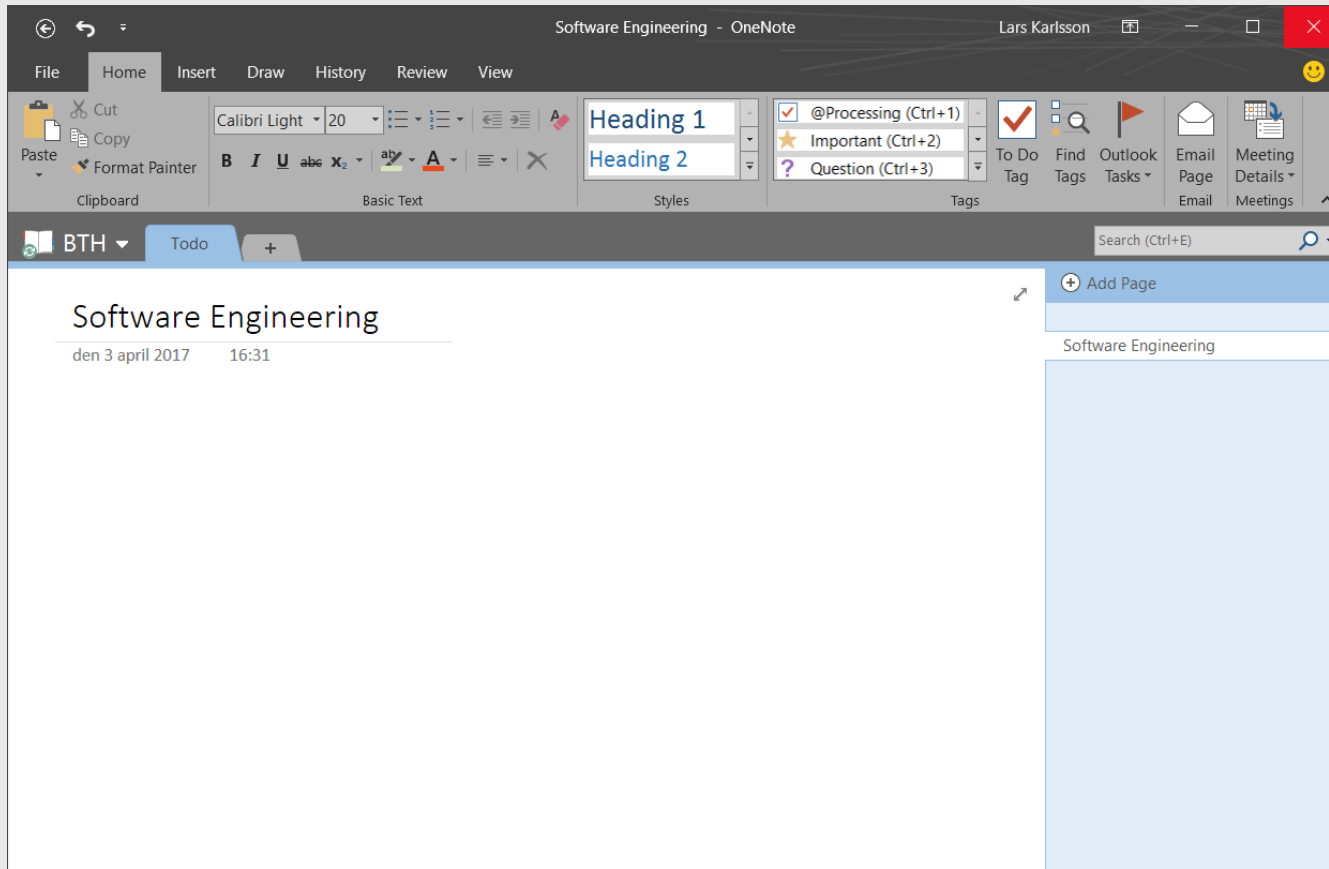

Context switching problems

My lifesaver during "intense" meetings

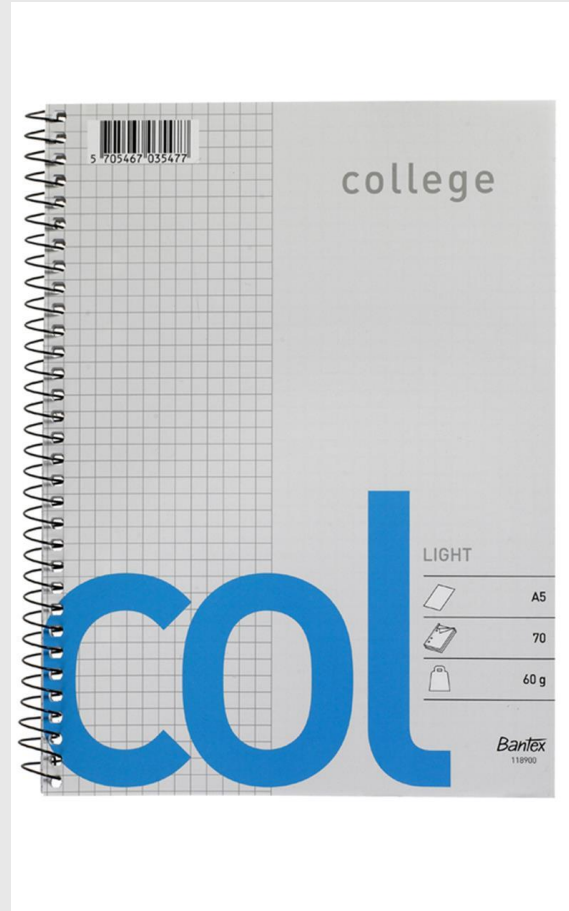

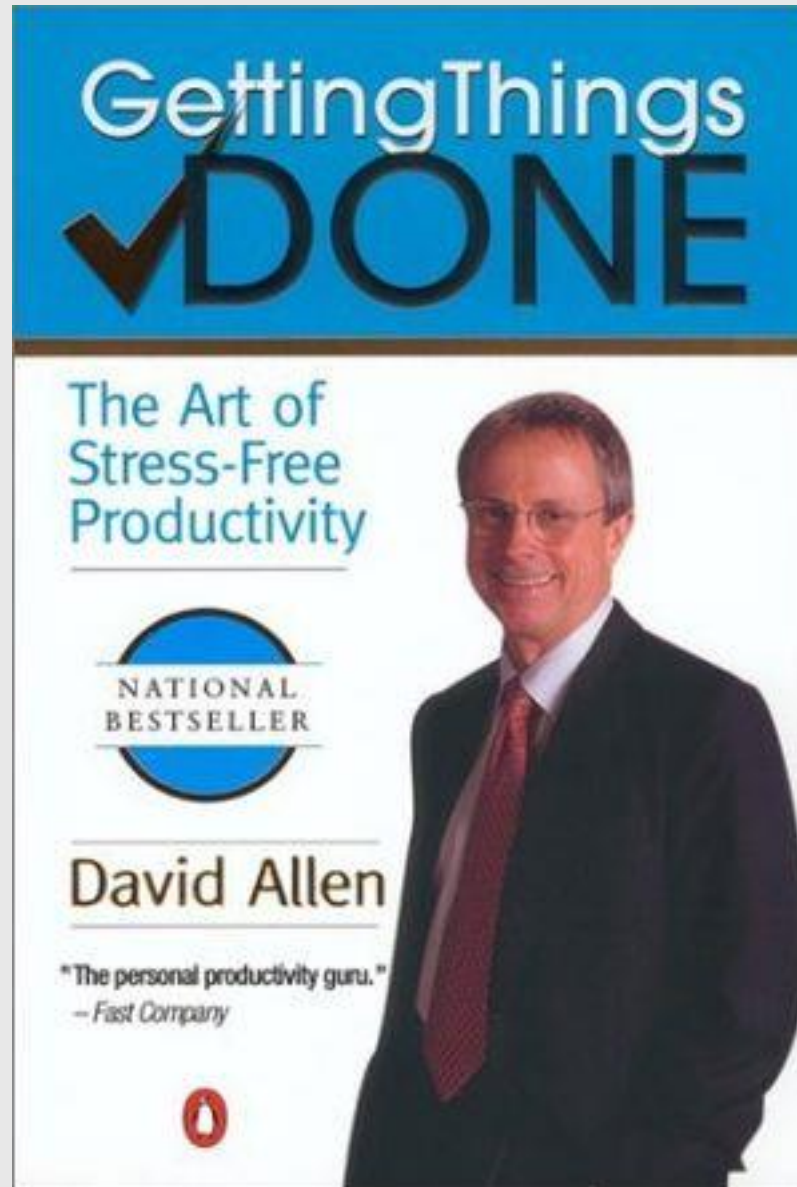

I'm in *Lead mode* 😊

Can't live without

I also use (more than You think!)

www.gettingthingsdone.se

It is all about...

Getting *useful* and not missing
opportunities.

Personal Experiences & Opinions

They are all mine.

An Opinion...

Is not worth a thing. Facts are.

Intuition...

Can be powerful and a good thing, but not in a discussion where You need to be concrete (facts).
(opinion vs facts)

Never Assume...

That will make an **ASS** out of **U** and **ME**

Add Value...

To the customer!

You Are Supposed To...

Make Your Company Profitable!

Learn How To

Use a Version Control System (VCS).

Use A...

Issue Tracking System!

Capacity Utilization

4 out of 5 days

A Process or a Method Is Not Thinking...

(at least not yet 😊)

You are.

You Are Allowed To...

Think

To Communicate...

Is extremely difficult.

People...

Are different!

Embrace Your Inner Nerd!

Are You A...

Manager or a leader ? There is a difference.

If You Don't Understand (The Customer)...

Ask (again and again and again)

Brainstorming...

Is (mostly) bad.

Open Plan Offices...

Is (mostly) bad.
(I want my door back)

Don't Work Yourself...

To death.

(You won't be rewarded)

Be A...

Minimalist.

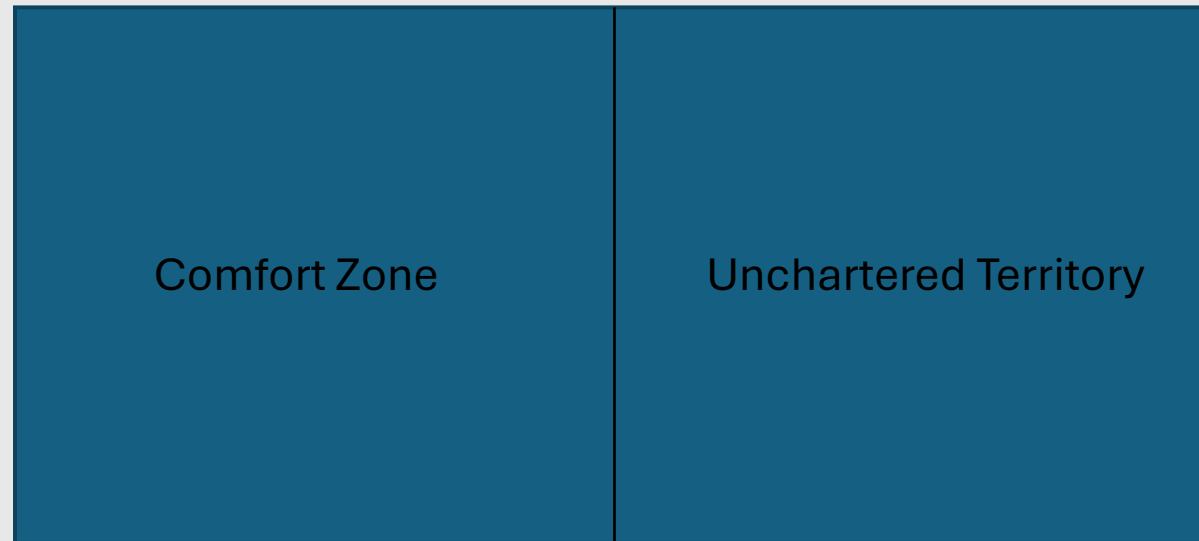

If A Customer Wants A New Feature...

And he/she doesn't add it to the Issue Tracking System

it doesn't exist!

Constant Personal Development...

The more I learn...

The less I Know

(but it is not a bad thing)

Technology Is Seldom The Problem...

People are.

A Technically Perfect Solution...

Seldom pays off. Good enough does.

Technical Debt - 1

Is sometimes the only way forward.

Technical Debt - 2

Managers and customers won't remember what You told them.

The Problem At-Hand & Your Development Knowledge

Is not the same thing.

Fad/Commercial-based Intelligence

As bad as opinions...

Read up on 'The history of computing'

You will be surprised.

Some Strange Encounters

- A project manager going bezerk
- A psycopath
- Too much workload
- An uncontrollable customer
- A bad contract

In general i'm thinking

In abstractions

In algorithms

In systems (non-linear)

(Not in terms of tools or implementations)

But In The End...

Staying happy and healthy is my goal.
